

Good Friday Afternoon,

We need to do an assignment. To get started on this you should have read Chapter 25 first.

Assignments come out by e-mail. I will also post them on the course web site, but it may be late Saturday or Sunday before that happens. Your mailbox is the first place to look.

Now for your first EE1813 assignment for the term. These questions should be relatively easy as they are mostly review of what you've done in high school physics. But be aware that they will become more demanding as the course proceeds and getting practice now will be of benefit. We recommend that you read the entire Chapter 25 before you begin the assignment.

Please use the cover sheet from the course web site. You can download it directly from this link: http://www.ece.unb.ca/Courses/EE1813/WEB/CoverSheet/EE1813_Cover_Sheet.pdf
Please work neatly. The markers will appreciate it.

From the third edition of Physics for Scientists and Engineers, by Randall Knight

Chapter 25:

Conceptual Questions 5, 7, 13, 15

Exercises & Problems 16, 32, 40, 47, 58, 67

Note that the practice you get doing these assignments is what will help you to be successful when you write the quizzes and the final exam. It's easy to watch someone do the problems, but the ability to do them yourself requires that you develop skill through practice. And you need the assignments for your portfolio.

Assignments are to be handed in by placing them in the appropriate slot in the box mounted on the wall outside of the ECE office (D36) - see the long version of the course syllabus for instructions and photos. The deadline for submission is Friday, September 25th at 4:00 p.m.. The marker will pick up the assignments shortly after that time.

Good luck and work diligently. The term passes VERY quickly.
